

# MagnaClean™ Professional2XP

*MagnaClean Professional2XP* has a larger filter capacity to remove greater volumes of magnetite and is the perfect solution for larger residential hydronic heating systems.

*MagnaClean Professional2XP* delivers protection against the damaging effects of black iron oxide sludge and scale. Unlike other dirt filters it features: specially designed 1 1/8" isolation valves; ultra-thin sheath; dual capture chambers and a larger canister for sludge capture, enabling it to capture and remove greater volumes of debris produced by larger systems with more heat emitters.

## Homeowner benefits

- Reduced heating bills and maintenance costs
- Immediate ongoing system protection
- Extended system life
- Reduced carbon emissions

## Fit a filter every time

*MagnaClean Professional2XP* should be fitted in-line on the return pipe. Alternative sitings can be located when the return pipe is not available.

ADEY always recommends that a magnetic dirt filter be installed on both new and existing systems to extend the operational life of the boiler as well as reduce maintenance call-outs and heating bills.

## Contractor benefits

- Ideal for 1" copper and 1 1/4" black iron pipes
- Designed for larger hydronic heating systems
- Magnetic and non-magnetic debris capture zones
- Greater filter capacity
- 360° rotational valves providing multiple installation options
- Bi-directional flow so either port can be an inlet for increased flexibility
- Ultra-thin removable sheath to enhance magnetic capture performance
- Low profile drain valve designed for easier servicing and dosing
- Improved sheath design for dual scale capture
- Rapid fit connectors for faster servicing
- Canister is a convenient water treatment dosing point
